Lengthy call queues for patients trying to contact their practice can cause a great deal of stress, only then to be vented toward the receptionist once they get through. Surgery Connect offers the Patient Callback solution which improves the caller experience thus reducing the difficult conversations your Reception staff have.

At predefined queue levels your callers are offered a call back, they will then retain a virtual queue position without the need to stay on the phone. We will then call the patient back when they are at the head of the queue so they are speaking to the reception staff immediately.

## BENEFITS FOR THE PATIENT...

- Reduced call costs, especially relevant to those using pay as you go mobiles.
- Greatly reduces patient stress, no more "hanging on the phone" to be answered.
- The fair and intelligent queue distribution is retained.

## BENEFITS FOR THE SURGERY...

- Fewer stressed patients means calls can be processed faster.
- Additional feature at no extra cost to you.
- Calling back the patients makes use of your unlimited free call package.

THRESHOLD

CALL BACK

Retries

Select your preferred mode of operation which will either enforce a callback or ask the caller to press a key to opt in or out.

Specify the number of queuing callers at which Patient Callback kicks in.

Configure the point in the queue that triggers the call back to the patient.

Set the number of times you would like the system to retry should the patient not answer the call back - also specify the delay between these retries.

SEND SMS

AUDIO

QUEUE VISIBILITY

Should the call back process not be able to contact the patient an SMS can be sent with the wording of your choice.

Specify the exact wording of the audio prompts linked with the Patient Callback feature.

The User Console allows visibility of both the real queue and the virtual queue - these queues are interlaced ensuring fair distribution of calls.
